

SUSTAINABLE PURCHASING POLICY R2 HOTELS

OUR OBJECTIVE:

At R2 Hotels, for several years now, we have been committed to the environment and sustainability worldwide.

And so we try to transfer this commitment into our purchasing operations with the contracting of our suppliers.

It is important for us to cover all of our guests' needs that may arise during their stay, although always trying to reduce costs and with great care not to compromise the quality of our products and therefore sustainability.

The aim of this document is to create a line of action for the purchasing department of our chain and the supervision of this with a sustainable character in the development of the activities that are carried out.

PRODUCT QUALITY and SERVICE:

It is very important to know at first hand the traceability of all those products supplied to us, as well as to know if they comply with the quality standards and their origin.

The most important products in terms of characteristics and importance are foodstuffs and cleaning products.

With regard to food products, these must comply with and be governed by the corresponding HACCP (Hazard Analysis and Critical Points Self-Checking), as this means that they follow the rules of the establishment and can comply with the quality standards governing the reception of the goods.

On the other hand, with regard to cleaning products and where the chemical products are found, they must be registered by the Ministry of Health and meet the necessary quality standards. They must have the technical data sheet updated at all times and also have first-hand knowledge of how to use them without the risk of accidents at work.

The correct cleaning and disinfection of the establishments and everything they contain must be ensured, but always without putting the integrity of the workers at risk.

GEOGRAPHICAL AREA OF PURCHASING INFLUENCE:

At R2 Hotels we promote purchasing and contracting with local, national or international suppliers. However, as far as possible, we try to ensure that procurement is to a greater extent local in order to boost and promote the products of our region, thus complying with sustainable and responsible purchasing.

In the same way, depending on our needs, in all purchases we try to ensure that between the production of the goods/items we request and our acquisition, intermediaries are non-existent or as few as possible.

RESPONSIBLE AND SUSTAINABLE:

From our chain, it is a priority to contract and/or collaborate with suppliers who also share the objectives of sustainability and environmental protection in all aspects. It is important that they share the same interest in this activity.

ENVIRONMENTALLY FRIENDLY OR ENVIRONMENTALLY RESPONSIBLE PRODUCTS:

When faced with a choice between two similar products, the one with a certificate of environmental friendliness, low consumption or local production will always take precedence.

RELATIONSHIP WITH SUPPLIERS:

The relationship with our suppliers will always be respectful and integral at all times throughout the commercial relationship.

These will be governed by the principles of objectivity, transparency and equal opportunities.

Suppliers involved in any negotiations will receive full information on the products to be supplied.

Likewise, continuous improvement plans will also be established with suppliers that will result in quality improvements as it will be beneficial for both parties.
